Design: Wilkhahn

Model 187/7
Task chair,
medium-height
backrest

Powered by Trimension, Wilkhahn's free-2-move concept is a global benchmark in healthy three-dimensional seating.

With its unified and harmonious design, the variety of models and customizable features make the AT chair family the smartest option among the free-2-move ranges.

The auto-centering mechanism of the seat shell ensures that your body maintains its center of gravity – regardless of the posture adopted or movement made. The backrest bearer with tilt capability comes with automatic weight adjustment. As a result, using AT's ergonomical range of motion is child's play. Just sit down, adjust the seating height and you're done! The chair and your body will do the rest on their own...

Awards

Trimension®

Without altering the chair, the auto-centering suspension of the seat shell, the backrest bearer, and the automatic weight adjustment allow bodies to maintain their center of gravity – whatever the posture or movement is. The coordinated design of each component creates a sculptural and seamless form. The chair conveys the fluid, automatic and intuitive movements that the user makes.

Seat/backrest shells, backrest bearer and frame

AT's key components are available in black or white, the backrest shell is also optionally upholstered at the rear. The armrest pad and all controls are always gray. The different upholstery elements make three backrest heights possible: medium height, advanced height and advanced height with headrest and neck rest. The upshot is a wide range of models for any area requiring office chairs. Fabric and leather upholstery from the Wilkhahn collection equip AT with almost infinite design possibilities.

Height adjustment/seat-depth extension

Icons on the controls illustrate what they do: the lever on the right adjusts with precision the seating height, the knob conveniently adjusts the seat depth while the user is sitting down.

Locking/optional presetting the automatic weight adjustment

The push button on the left locks the chair in a neutral 0 position and the knob allows presetting in ten increments to adapt to personal levels of comfort.

Integrated lumbar support and optional 3D forward tilt

All AT models feature integrated lumbar support. The lumbar height is also very easy to adjust by 2.4" via two handles on the sides of the backrest. The optional activation of the innovative forward seat tilt raises in synchrony the backrest and the lumbar support.

The height of the **armrests** is adjustable by 3.9" at the touch of a button. The depth of the armrest pads on 3D armrests can also be extended by 2" and the width by 1", 4D armrests can also rotate inwards and outwards by 25°.
