IN. 184 range.
The IN office chair is considered the most dynamic and at the same time most comfortable office chair. It stimulates body and mind and is relaxing at the same time. The two swivel arms move independently of one another and interact perfectly with the black or white seat and back made of state-of-the-art two-component technology and the 3D Formstrick cover. Body and chair merge to become a unit that's flexible in all directions and can tilt forwards. Counter pressure can be adjusted to users weighing from 45 to 140 kilos. And of course all the practical adjustment options for armrests, lumbar support and seat depth are available too.
Function
An office task chair with Trimen-sion®, integrated synchronously supporting 3D kinematics which allows the right-hand and left-hand half of the seat to be tilted in any direction via two swivel arms that move independently of one another. The goal is to encourage the natural range of motion the human pelvis is capable of which includes flexing, extending and moving it sideways to rotating it. The combination of the 3D synchronous adjustment mechanism with a highly elastic seat and back guarantees the chair adapts automatically to any movement made or posture adopted by the person sitting on it. As a result, the body is supported in any position and maintains its centre of gravity.

The counter pressure, which provides support in any direction moved in, is precision adjustable for people weighing from 45 to 140 kg by changing the elasticity. The backrest has optional, height-adjustable lumbar support (in six lockable positions of up to 60 mm).

Frame
Task chairs
Five-star base made of black-through-dyed, glass-fibre-reinforced polyamide, optionally die-cast aluminium, coated, polished or high-lustre polished. Twin wheel swivel castors with load-dependent braking, made of black polypropylene compliant with DIN EN 12529 as the standard version for carpets; optionally with grey polyurethane tyre for hard floors. Castors optionally electrically conductive. Gas lift covered by telescopic protective tube made of black through-dyed polypropylene. Mechanism cover made of die-cast aluminium, coated matt black with black through-dyed polypropylene bellows and thermoplastic elastomer to accommodate the flexibly mounted central spring, knob to adjust the counter pressure made of polyamide (for people weighing from 45 to 140 kg). Each chair has two swivel arms, which can move independently of one another, made of die-cast aluminium, coated, matt polished or high-lustre polished, with protective caps made of polypropylene.

Counter stool
Star base from the ON 170 range, with additional height-adjustable foot ring, bright chrome plated, with lock screw to affix it and twin wheel swivel castors with load-dependent braking.

24-hour chairs
Always with die-cast aluminium star base, with extra swivel arm supports and high-performance covers. Designed for people weighing up to 150 kg, the models also comply with the British Standard.
IN. 184 range. Technical details.

Seat and back
Unitary, highly elastic and flexibly suspended seat and back made of high-performance polyamide. Seat shell made of black or white through-dyed polyamide with polypropylene seat upholstery panel. Polyurethane seat cushions with CFC-free foam, covered in Racer, optionally also with Formstrick (form-fit knit) that offers different support zones, in the same material as the backrest cover, or with fabric covers from the Wilkhahn fabric collection, then with facings sewn-in and deep top stitching lengthways to create contours. All models, with the exception of the seat with cover 41/Formstrick, optionally seat with soft padding with extra cut foam fleece). The seat upholstery panel, cushioning and covers are replaceable. The back section is the frame, optionally with Hytrel® lumbar support, in black or white to match the seat shell; height-adjustable by 60 mm in six lockable positions and can be retrofitted at any time. The back is covered in Formstrick which includes different levels of elasticity for flexible and supporting zones, optional two-ply cover made of Formstrick with integrated upholstery foam with different support zones. Colours based on the Wilkhahn sample card.

Armrests
Armrests height adjustable by 100 mm in ten lockable positions and made of glass-fibre-reinforced, black through-dyed polyamide, optionally with three-dimensional adjustment. Armrest pads made of black through-dyed polypropylene, optionally of polyurethane foam. Also optionally without armrests.

Standards
The IN task chairs comply with the DIN EN 1335, ANSI/BIFMA X 5.1. and GS standards.

Please note
If very damp, the elasticity of the Formstrick can slightly slacken, but will regain its original shape when it dries.

Trimension® lies at the heart of IN. This integrated, synchro-supporting 3D kinematics allows the right and left-hand sides of the seat to lean in any direction via two swivel arms that move independently of one another. The goal is to activate the natural range of motion that our pelvises are capable of by flexing, extending, leaning sideways or rotating them. With its patented Trimension®, Wilkhahn has taught seating to walk. This kinematics offers a type of dynamic seating which is exceptional to date and which mirrors the way people’s joints naturally work. Two sliding joints close to the knees and two socket joints near the hips are connected via the swivel arms just like thighs. The range of motion includes synchronous leaning backwards and forwards from -12° to 0°, or includes activating an opening angle of up to 5° in the seat and an up to 26° tilt in the back. At the same time, the seat and back can be tilted sideways from the horizontal by up to 13°. The counter pressure provides support in any direction and infinite adjustment of the elasticity allows it to adapt to people weighing between 45 to 140 kg.

Just like its big brother ON, where Trimension® was used for the first time, IN has also been designed to provide the best in form and function. It's also made to last. Its dynamic 3D seating concept, enhanced added value due to its health-giving benefits, first-class materials and superb craftsmanship make it an excellent choice. Its modular and service-friendly design make replacing expendable parts, covers and upholstery easier and extends its useful life. The chair does of course come with CFC-free foam cushions and eco-friendly materials. Wherever technically possible, we've used materials that can be recycled. Each part is labelled so that it can be properly recycled. As a result, in the simplest version, up to 94% of IN can be recycled or up to 93% where the superior version is concerned.

- The materials marry extreme precision with robust stability. The star bases consist optionally of die-cast aluminium, or through-dyed, glass fibre-reinforced reinforced polyamide and the swing plates of cast aluminium. The flexible seat shell and backrest frame are made of high-performance polyamide and the armrests of glass fibre-reinforced polyamide. The mechanism housing is made of die-cast aluminium with bellows to accommodate the flexibly mounted central spring made of black through-dyed polypropylene and thermoplastic elastomer. All aluminium and polypropylene components comprise a maximum of recycled materials and can be fully recycled.

- The seat cushions are made of CFC-free covered polyurethane. With seat upholstery panels they can also be replaced, alongside the cushioning and covers.

- The adjustment and motion functions are simplicity itself and offer ease of use. Consequently, if a chair wears out it can be easily repaired or parts retrofitted to extend its useful life.

The worldwide new standard in three-dimensional dynamic seating is equally straightforward and high quality. Due to its smart design the number of parts has been reduced. The integrated multiple functions are eco-friendly and offer excellent value.
