

IN. 184 range

IN.  
Design: wiege  
Model 184/7

The IN office chair is considered the most dynamic and also the most comfortable office chair. It stimulates body and mind while providing extreme comfort at the same time. The two swivel arms move independently from one another and interact seamlessly with the black or white seat and back shell, made of state-of-the-art two-component technology. The soft 3D Formstrick cover completes the package.

Body and chair merge to become one, providing flexibility in all directions and can even tilt forward. Counter pressure can be adjusted by users weighing from 99 to 308 pounds. In addition, all the adjustment options for armrests, lumbar support and seat depth are also available.

#### Awards

reddot award 2015  
winner

**Matte coated frame surfaces:** The frame surfaces are also powder coated to match the colors of the form-fit knits on the back. In addition to the standard coatings in matte black or silver satin finish, they are also available in conjunction with aluminum star bases in the same color in turquoise, gray, orange, and red – all matte. **Polished frame surfaces:** With an aluminum star base in the same design, the die-cast aluminum swivel arms are also available in polished versions. This surface looks highly authentic and matches other natural surfaces well. **High-luster polished frame surfaces:** Combined with chrome-plated surfaces, the high-luster polished frames are another appropriate alternative. Due to their reflective nature, they also make IN look sleeker and more elegant.

**Backrest in Formstrick (form-fit knit)**  
The lumbar support with higher, three-dimensional density is integrated in the breathable form-fit knit on the back. The otherwise slightly transparent cover is made in one piece and applied to the backrest frame. As a result, it adapts to different body shapes and postures.

**Backrest with double-ply form-fit knit**  
With a double-ply cover, IN looks exceptionally high quality and even more comfortable. The integrated and equally breathable upholstery foam and the additional stitching ensure a distinctive three-dimensional contour which is reinforced by the optional, additional lumbar support when the chair is viewed from the back.

**Trimension® with front tilt**  
The seat and back construction can tilt synchronously from the horizontal by up to 12° in the seat, up to 26° backwards in the back with a sideways tilt of up to 13°. Turning the button upwards on the left underneath the front edge of the seat produces a vertical sitting posture with an extra 5° frontwards tilt.

**Seat-depth extension**  
In the standard version the seat depth is 430 mm (approx. 16" inches). If you have shorter thighs, you can activate the optional seat-depth extension to decrease the length of the chair in four lockable stages, or if you have longer thighs you can extend it by up to 450 mm (approx. 17" inches). The patented adjustment can be made while seated by pushing slide controls on both sides.

**Technical overview**  
The task chairs have patented Trimension® for three-dimensional, automatic adjustment to any movement and posture. They are combined with the 3D synchronous adjustment technology via the highly elastic seat and back construction. The counter pressure can be adjusted infinitely and locked in the front sitting position. There is optional lumbar support which can be adjusted in height by 60 mm (approx. 2 1/4 inches). The seating height is infinitely adjustable at the touch of a button. Optional seat-depth extension from 400 to 450 mm (approx. 15 3/4 to 17 3/4 inches) is also available.

All dimensions are in mm (inches)
